

J.D. Peiffer

AI Researcher in Computer Vision with Demonstrated Clinical Deployment Experience

jdpeiffer.com • linkedin.com/in/jdpeiffer • github.com/peifferjd

Education

Northwestern University / Center for Bionic Medicine, Shirley Ryan AbilityLab

Chicago, IL

Sept 2022 – present

MS, PhD in Biomedical Engineering

- GPA: 3.81 | NSF Graduate Research Fellowship (2022); NIH T32 Training Grant (2024)

Washington University in St. Louis

St. Louis, MO

Rotation Student in Biomedical Engineering

Aug 2021 – July 2022

University of Missouri

Columbia, MO

BS in Biomedical Engineering

Aug 2017 – May 2021

- GPA: 3.92 | Emphasis: Bioinformatics | Minor: Mathematics
- Honors Scholar; Dean's List (all semesters)

Experience

PhD Researcher

Chicago, IL

Center for Bionic Medicine, Shirley Ryan AbilityLab

Sept 2022 – present

- Led first-author research in computer vision, sensor fusion, and biomechanical modeling for clinical AI, taking models from concept through validated clinical deployment; 15+ publications, >170 citations in <4 years.
- Developed and released the Portable Biomechanics Laboratory — the first clinically validated single-camera smartphone gait analysis system, achieving <3° joint-angle error and ICC > 0.9 for derived gait biomarkers; first-author paper in npj Digital Medicine (Nature).
- Deployed PBL to 3 external clinical sites (Shriners Children's, Lake Lucerne Institute), each of which published independent validation studies; demonstrated derived gait metrics detect surgical response in cervical myelopathy more sensitively than standard patient-reported outcomes.
- Designed a neural-network fusion of uncalibrated IMU and monocular smartphone video, cutting knee angle error 26% while maintaining accuracy through visual occlusions.
- Co-authored B3D, a feed-forward biomechanical prediction head on a frozen SAM-3D-Body foundation model, distilled label-free via differentiable MuJoCo physics; accepted to ECCV 2026 workshop.
- Built multi-camera calibration and SAM-based pseudo-labeling pipelines, generating pseudo-ground-truth annotations to train and benchmark monocular scene reconstruction models; curated a 10,000-video clinical movement dataset for scene understanding model development.
- Trained a contrastive learning + causal masking transformer on unannotated clinical gait data; demonstrated learned embeddings classify neurological diagnosis and track patient response to inpatient therapy.

Research Scientist Intern

Redmond, WA

Glove Sensing and Tracking Team, Meta Reality Labs

June 2025 – Feb 2026

- Implemented a real-time hand pose estimation and inverse-kinematics pipeline achieving <5 mm fingertip tracking error at 60 Hz with occlusion robustness across a 22-DoF hand model.
- Trained a CNN+Transformer model on fiber-optic sensor data for direct hand pose regression, benchmarking learned pose estimation against an inverse-kinematics baseline.
- Collected a dexterous-manipulation benchmarking dataset with motion-capture ground truth and authored production evaluation pipeline; first-author paper accepted to IROS 2026.

Fulbright-Mitacs Globalink Intern

Alberta, CA

Neuromuscular Control & Biomechanics Laboratory, University of Alberta

May 2020 – Aug 2020

- Computationally modeled seated human trunk biomechanics under Functional Electrical Stimulation (FES) and designed LQR and fuzzy inference (FIS) feedback controllers; validated closed-loop stability in simulation.

Undergraduate Researcher

Neural Engineering Laboratory, University of Missouri

Columbia, MO

Aug 2020 – May 2021

- Developed and optimized a closed-loop gamma oscillation detection and modulation algorithm achieving <2 ms latency on embedded hardware; open-sourced on [GitHub](#).

Undergraduate Researcher

Pulmonary Imaging Research Laboratory, University of Missouri

Columbia, MO

Aug 2018 – May 2021

- Built a semi-automated image segmentation, registration, and quantification pipeline enabling large-cohort comparison of 129Xe MRI vs. 99mTc SPECT; first-author publication in Academic Radiology (2024).
- Won Audience Choice Award for oral presentation at International Workshop on Pulmonary Functional Imaging (2019).

Selected Talks

- **Harnessing movement as a biomarker through deployable motion capture**, Invited talk to Eli Lilly & Human Longevity Lab (2026)
- **Deployable motion capture for in-clinic and in-the-wild biomechanical measurement**, Computerized Motion Analysis Laboratory Visiting Professor Program, Chicago, IL (2026)
- **Leveraging AI for Real-World Biomechanical Reconstruction from a Single Moving Camera**, European Society of Biomechanics, Zurich, Switzerland (2025)
- **Differentiable Biomechanics for Markerless Motion Capture in Upper Limb Stroke Rehabilitation**, International Consortium for Rehabilitation Robotics, Chicago, IL (2025)
- **Accurate Lower Body Kinematics Using a Handheld Smartphone**, American Society of Biomechanics Annual Meeting, Madison, WI (2024)

Selected Honors

- **NSF Graduate Research Fellowship**, National Science Foundation (2022)
- **Fulbright-Mitacs Globalink Internship** (2020)
- NIH T32 Training Grant (2024)
- 2nd Place Best Student Paper, ICORR (2025)
- Barry M. Goldwater Scholarship Campus Nomination (2019)
- Audience Choice Award, International Workshop on Pulmonary Functional Imaging (2019)
- 2 x Boston Marathon Qualifier (2024, 2025)
- Cherng Summer Scholar, University of Missouri (2019)

Skills

Languages: Python, C++, R

ML Frameworks: JAX (Jaxlie), PyTorch (Pytorch3D), TensorFlow, MuJoCo/MJX, OpenCV

Infrastructure: Docker, Kubernetes, Git, SQL, Datajoint, W&B

Research Areas: Computer Vision, Sensor Fusion, Biomechanics, Wearables, Self-Supervised Learning, Generative Models

Publications

Biomechanics-aware Multi-view Markerless Motion Capture of Dexterous Hand Movements

July 2026

Pouyan Firouzabadi, *J.D. Peiffer*, Kunal Shah, Anton Sobinov, Lee E. Miller, R. James Cotton, Wendy M. Murray
[10.48550/arXiv.2607.02796](#) (arXiv)

Noah Bryson, Lorenzo Lombardi, Rachel Hawthorn, Jie Fei, Rodolfo Keesey, *J.D. Peiffer*, Ismael Seáñez
10.1088/1741-2552/ace552 (Journal of Neural Engineering)

Chicago, IL

Mar 2025 – June 2025

- Instructed graduate students in Python-based ML including data preprocessing, regression, tree-based methods, DNNs, and CNNs.

Columbia, MO

Jan 2020 – May 2021

- Created curriculum introducing graduate students to scientific data manipulation and parallel computation job submission on HPC clusters.

Dec 2018 – present

Vail Resorts

Apr 2023 – Apr 2025

Developed interactive sessions for high school students on biomechanics, prosthetics, computer vision, and AI for medical image analysis.

Apr 2022 – present

BioRob, IROS, iScience, CMBBE — Imaging & Visualization

Nov 2018 – Aug 2020

- Organized a week-long adaptive sports service trip (Ski Apache, NM) for 12 participants; assisted in instruction of students with visual, cognitive, and physical disabilities.
